

# **Specifications of MAP Translation (MAP-T) MAP Encapsulation (MAP-E)**

Xing Li, etc

T. Murakami, etc

2012-03-30

# MAP framework

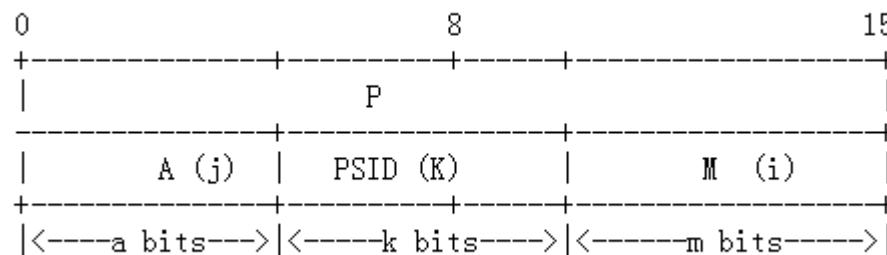

- MAP Series: ONE Complete Standard (MAP, MAP-E, MAP-T, MAP-DHCP)
- Data path forwarding are based on existing standards
- Different applicability

Beijing Interim meeting Consensus-Create Design team  
Well-discussed in the mailing-list for about 6 months

# Address format and Port-mapping algorithm

```
<-- n bits -->|<o bits>|<-m bits>|< 8>|<---- L>=32 ----->|<--56-L-->
+-----+-----+-----+-----+-----+-----+
| IPv6 prefix |EA bits |Subnet-id| u | IPv4 address |PSID| 0   |
+-----+-----+-----+-----+-----+-----+
|<End-user IPv6 prefix >|
```

Same address format for BMR and FMR

Same port mapping algorithm (GMA)

# MAP address example

map calculator (octet boundary, bitwise ratio)

IPv4: 202.38.117.64 /29 PREF: 2001:da8:a4a6:: /48 Ratio: 4

# MAP-T

- Stateless Double translation
  - One mode of MAP with specific DMR
  - Keep IPv4 end-to-end transparency except corner cases
  - Use existing IPv6 tools for O&M
  - Extended work of stateless translation from Behave WG

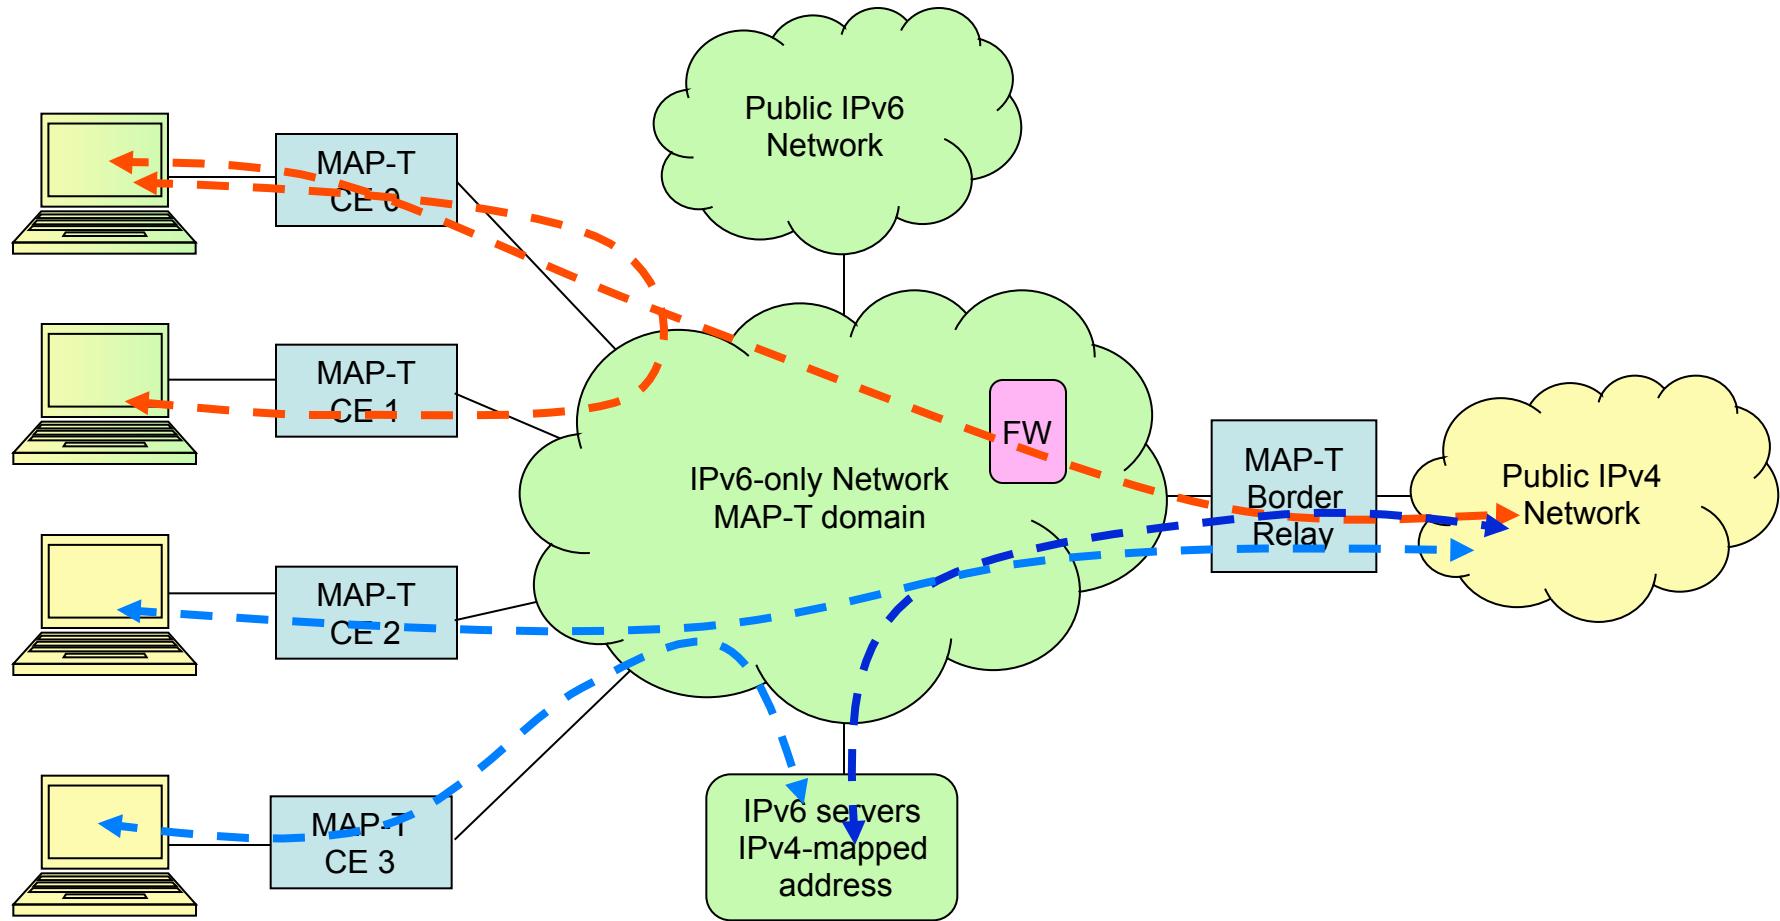

# DMR /Date Forwarding Path

- DMR
  - BR IPv6 address

- Data forwarding path
  - RFC 6145
  - Compatible with single translation

# Network topology

# MAP-T can keep IPv4 end-to-end transparency except corner cases

# MAP-T can use existing IPv6 tools for O&M

- Null route
- ACL
- eACL
- PBR
- QoS
- Caching

Rate limit example

# Configuration

- MAP-T Border Relay configuration

```
control start
ivictl -r -p 202.38.117.0 -l 24 -P 2001:da8:b4b6:: -L 48 -R 16
-M 2 -f mapt
ivictl -r -d -P 2001:da8:b4b6:ffff:: -L 64
ivictl -s -i eth2 -I eth1
```

- MAP-T CE configuration

```
control start
ivictl -r -d -P 2001:da8:b4b6:ffff:: -L 64
ivictl -s -i eth1 -I eth0 -H -N -p 10.1.1.0 -l 24 \
-A 202.38.117.1/24 \
-P 2001:da8:b4b6:: -L 48 -R 16 -M 2 -o 0 -f mapt
```

## Summary of MAP-T

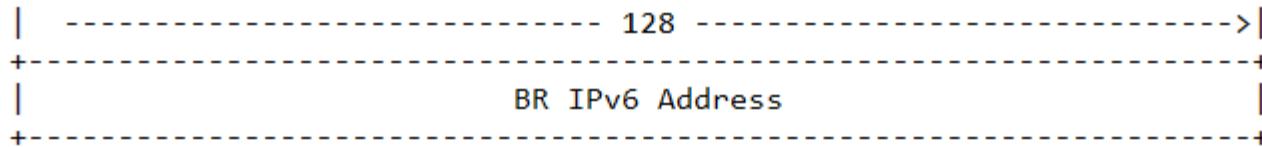

- MAP-T belongs to MAP along with MAP-E to form a single standard
- MAP-T has its own application scenarios
- MAP-T has running code and the code will be released soon
- MAP-T is tested successfully in production IPv6-only network (CERNET2)

# MAP-E

- Encapsulation for stateless tunneling
  - One mode of MAP with specific DMR
  - Simply, Stateless, Automatic IPv4-in-IPv6 Tunnel
- Transparent IPv4 packet through a domain
  - Pipe/Short-Pipe Diff-Serv tunneling model
  - GTSM
  - etc.,

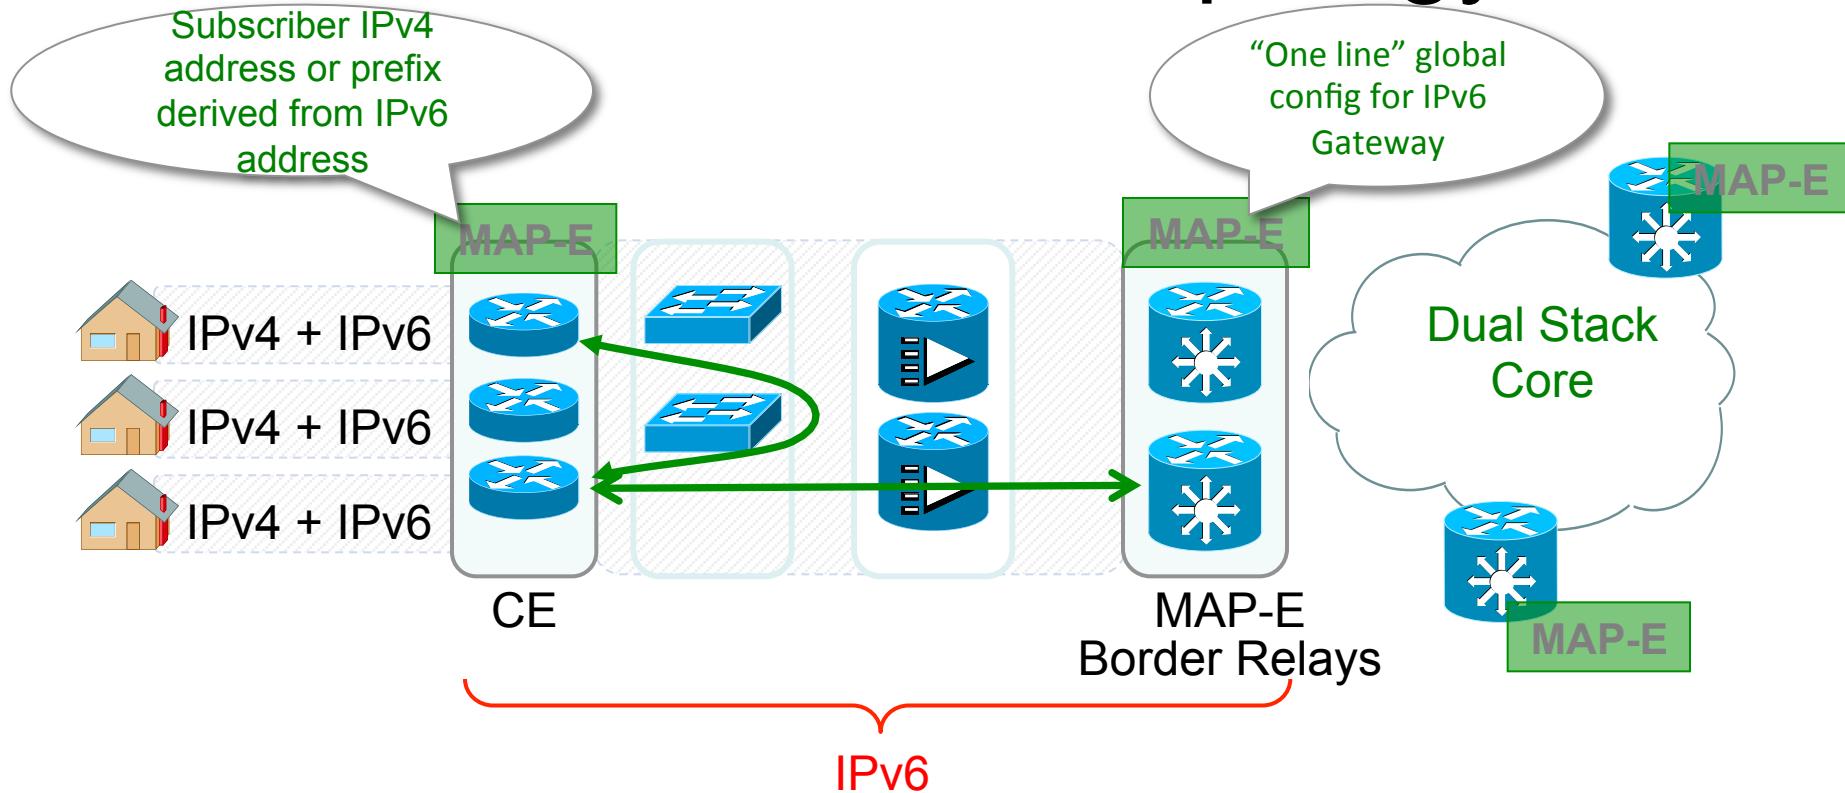

# DMR/Data Forwarding Path

- DMR
  - BR IPv6 address

- Data Path
  - RFC2473
  - Keep IPv4 packet through a domain

# MAP-E network topology

- Native dual-stack IP service to the Subscriber
  - Simple, stateless, automatic IPv4-in-IPv6 encap and decap functions
  - IPv4 traffic automatically follows IPv6 Routing
- BRs placed at IPv4 edge, addressed via anycast for load-balancing and resiliency
  - Defined in [draft-mdt-softwire-map-encapsulation](#)

# Configuration

- MAP-E Border Relay Configuration

```
# ip -6 tunnel add frd1 mode ip/ipv6
# ip -6 tunnel change frd1 rule_ipv6_prefix 2001:db8::/40
rule_ipv4_prefix 192.0.2.0/24 ce_ipv6_prefix_len 56 fmr
enable
```

- MAP-E CE Configuration

```
# ip -6 tunnel add frd1 mode ip/ipv6
# ip -6 tunnel change frd1 rule_ipv6_prefix 2001:db8::/40
rule_ipv4_prefix 192.0.2.0/24 ce_ipv6_prefix_len 56 fmr
enable border_router 2001:db8::1
```

# Summary of MAP-E

- MAP-E belongs to MAP along with MAP-T to form the single standard.
- MAP-E enables existing operational techniques which rely on transparency
- Only difference is DMR/data path
- MAP-E has running code and software will be released soon.

# Next steps

- Working group adoption
  - Complete MAP-T & MAP-E
