

# DS-Lite Multicast Extension Implementation

IETF 83-Paris, March 2012

X.Deng, M. Boucadair, C. Jacquet

# DS-Lite Multicast Extension Implementation

- **Implemented I-Ds**

- I-D.ietf-softwire-dslite-multicast
- I-D.ietf-mboned-64-multicast-address-format
- I-D.qin-softwire-multicast-prefix-option

- **Home Gateway performance experiments results**

| Model  | Version | Status | Target(s)            | Platform      | CPU Speed (MHz) | Flash (MB) | RAM (MB) |
|--------|---------|--------|----------------------|---------------|-----------------|------------|----------|
| WRT54G | 1.0     | 0.9    | brcm-2.4<br>brcm47xx | Broadcom 4710 | 125             | 4          | 16       |

- Able to function as mB4 to deliver videos of up to 1000Kbps (Bit rate )

- **Demo in IETF #82**

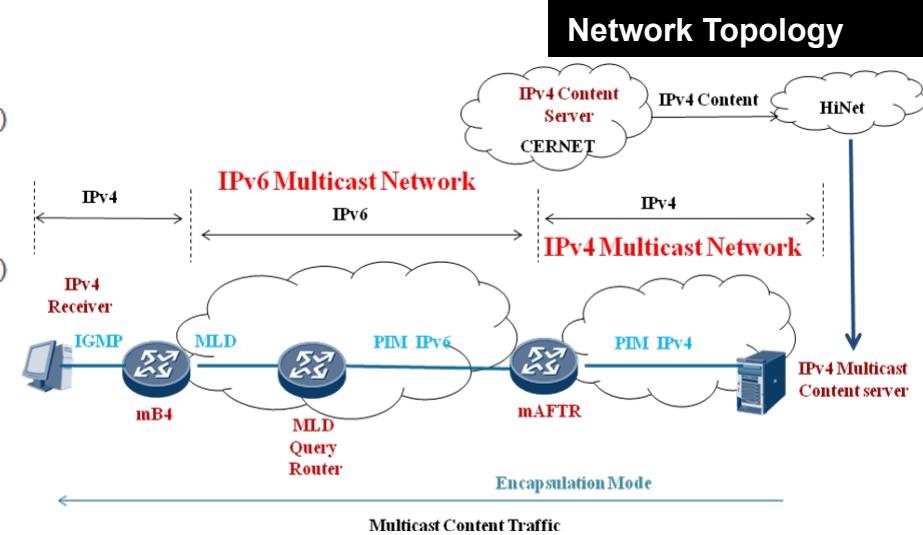

- Operator implemented mB4 interoperates with vendor's mAFTR
- Multiple IPv4 TV Content Channels delivered from mainland China to Taiwan IETF on site

**IPTV channels**

**On Site equipments**

# DS-Lite Multicast Extension Implementations: Updates

- **mB4 updates**
  - Multicast PREFIX64 is configurable via configuration file
  - or via DHCPv6 Option provisioning as specified in I-D.ietf-softwire-multicast-prefix-option
- **Open source mB4 project on Sourceforge**
  - <http://sourceforge.net/projects/mb4/>
