IANA Interface Type and Address Family YANG Modules  
draft-ietf-netmod-iana-if-type-04

Abstract

This document defines the initial versions of the iana-if-type and iana-afn-safi YANG modules.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on December 7, 2012.

## 1. Introduction

This document defines the initial version of the iana-if-type and iana-afn-safi YANG modules, for interface type definitions, and Address Family Numbers (AFN) and Subsequent Address Family Identifiers (SAFI), respectively.

The iana-if-type module reflects IANA's existing "ifType definitions" registry. The latest revision of the module can be obtained from the IANA web site.

Whenever a new interface type is added to the "ifType definitions" registry, the IANAifType-MIB and the iana-if-type YANG module are updated by IANA.

The iana-afn-safi module reflects IANA's existing "Address Family Numbers" and "Subsequent Address Family Identifiers" registries.

Whenever a new address family number is added to the "Address Family Numbers" registry, the IANA-ADDRESS-FAMILY-NUMBERS-MIB and the iana-afn-safi YANG module are updated by IANA.

Whenever a new subsequent address family identifier is added to the "Subsequent Address Family Identifiers" registry, the iana-afn-safi YANG module is updated by IANA.

## 2. IANA Maintained Interface Type YANG Module

```
<CODE BEGINS> file "iana-if-type.yang"

module iana-if-type {
  namespace "urn:ietf:params:xml:ns:yang:iana-if-type";
  prefix ianaift;

  organization "IANA";
  contact
    "      Internet Assigned Numbers Authority

    Postal: ICANN
           4676 Admiralty Way, Suite 330
           Marina del Rey, CA 90292

    Tel:    +1 310 823 9358
    E-Mail: iana@iana.org";
  description
    "This YANG module defines the iana-if-type typedef, which
    contains YANG definitions for IANA-registered interface types.

    This YANG module is maintained by IANA, and reflects the
    'ifType definitions' registry.

    The latest revision of this YANG module can be obtained from
    the IANA web site.

#### 4. IANA Considerations

This document defines the initial version of the IANA-maintained `iana-if-type` and `iana-afn-safi` YANG modules.

The `iana-if-type` module is intended to reflect the "ifType definitions" registry. When an interface type is added to this registry, a new "enum" statement must be added to the "iana-if-type" typedef, with the same name and value as the corresponding enumeration in IANAifType-MIB. If the new interface type has a reference, a new "reference" statement should be added to the new "enum" statement. If an interface type is deprecated in the "ifType definitions" registry, the corresponding "enum" statement must be updated with a "status" statement with the value "deprecated".

When the `iana-if-type` YANG module is updated, a new "revision" statement must be added.

The `iana-afn-safi` module is intended to reflect the "Address Family Numbers" and "Subsequent Address Family Identifiers" registries. When an AFN or SAFI is added to these registries, a new "enum" statement must be added to the "address-family" or "subsequent-address-family" typedefs. If the new parameter has a reference, a new "reference" statement should be added to the new "enum" statement. If a parameter gets deprecated in the registry, the corresponding "enum" statement must be updated with a "status" statement with the value "deprecated".

When the `iana-afn-safi` YANG module is updated, a new "revision" statement must be added.

This document registers two URIs in the IETF XML registry [RFC3688]. Following the format in RFC 3688, the following registrations are requested to be made.

URI: `urn:ietf:params:xml:ns:yang:iana-if-types`

Registrant Contact: IANA.

XML: N/A, the requested URI is an XML namespace.

URI: `urn:ietf:params:xml:ns:yang:iana-afn-safi`

Registrant Contact: IANA.

XML: N/A, the requested URI is an XML namespace.

This document registers two YANG modules in the YANG Module Names registry [RFC6020].

```
name:      iana-if-type
namespace: urn:ietf:params:xml:ns:yang:iana-if-type
prefix:    ianaift
reference:  RFC XXXX

name:      iana-afn-safi
namespace: urn:ietf:params:xml:ns:yang:iana-afn-safi
prefix:    ianaaf
reference:  RFC XXXX
```

## 5. Security Considerations

Since this document does not introduce any technology or protocol, there are no security issues to be considered for this document itself.

## 6. Normative References
