APPSSAWG: Administrative boundaries in the DNS

Andrew Sullivan
asullivandyn.com
What?

- draft-sullivan-domain-origin-origen-assert-01
- Indicate administrative relationships between DNS names
  - In the DNS
Why?

- People use names to build policy
- That doesn’t work
  - Can’t read actual admin structure from DNS
- Other mechanisms have problems
Why not?

• Needs a new RRTYPE
• Applications can’t talk to the DNS
• Hard to deploy
• Proxied access to Internet
• Probably other serious problems I don’t understand
Why bother?

Is this worth pursuing?
