IETF 84, Vancouver
BEHAVE meeting

2012-08-02

Status

- Draft adopted as WG item on April 17
- Two additional revisions done since then
- Discussed in two virtual interim meetings
- Current revision: -02

From -00 to -01

- Added CGN stuff (per-subscriber quotas, counters, notifications).
- Added conformance groups and compliance statements.
- Added mapping table indexed by external 3-tuple.
- Punted on the issue of managing multiple NATs per SNMP agent.

From -01 to -02

- The MIB has been merged with the one from RFC 4008.
- The "NEW-" prefix was dropped.
- All objects from RFC 4008 have been marked deprecated.
- Our draft now should say "Obsoletes: 4008"
(meant to do it but forgot, will be added in -03)
- Added section 2.1 that explains in detail why 4008 objects are deprecated.
- Removed all CGN-specific things and resubmitted them as draft-perreault-sunset4-cgn-mib-00.

To-Do

- Multiple “realms” (a.k.a. VRFs)
- Minor polishing
- What else?

Proposed Next Steps

1.Publish -03

2.Reviews

- Let's take names now! Please volunteer!

- 2 operators: _____, _____

- 2 vendors: _____, _____

3.MIB doctors

4.WGLC
