

Affirmation of the Modern Global Standards Paradigm

Over the past several decades, the global economy has realized a huge bounty due to the Internet and the World Wide Web. This could not have been possible without the innovations and standardization of many underlying technologies. This standardization occurred with great speed and effectiveness only because of key characteristics of a modern global standards paradigm. As a means to ensure acceptance of standards activities that adhere to the principles, the affirmation below characterizes the principles that have led to this success.

We embrace a modern global standards paradigm where the economics of global markets, fueled by technological advancements, drive global deployment of standards regardless of their formal status.

In this paradigm standards support interoperability, foster global competition, are developed through an open participatory process, and are voluntarily adopted globally. These voluntary standards serve as building blocks for products and services targeted at meeting the needs of the market and consumer, thereby driving innovation. Innovation in turn contributes to the creation of new markets and the growth and expansion of existing markets.

Participation in the modern paradigm demands:

1. **Cooperation.** Respectful cooperation between standards organizations, whereby each respects the autonomy, integrity, processes, and intellectual property rules of the others.
2. **Adherence to principles.** Adherence to the five fundamental principles of standards development:
 - Due process. Decisions are made with equity and fairness among participants. No one party dominates or guides standards development. Standards processes are transparent and opportunities exist to appeal decisions. Processes for periodic standards review and updating are well defined.
 - Broad consensus. Processes allow for all views to be considered and addressed, such that agreement can be found across a range of interests.
 - Transparency. Standards organizations provide advance public notice of proposed standards development activities, the scope of work to be

undertaken, and conditions for participation. Easily accessible records of decisions and the materials used in reaching those decisions are provided. Public comment periods are provided before final standards approval and adoption.

- Balance. Standards activities are not exclusively dominated by any particular person, company or interest group.
- Openness. Standards processes are open to all interested and informed parties.

3. **Collective empowerment.** Commitment by affirming standards organizations and their participants to collective empowerment by striving for standards that:

- are chosen and defined based on technical merit, as judged by the contributed expertise of each participant;
- provide global interoperability, scalability, stability, and resiliency;
- enable global competition;
- serve as building blocks for further innovation; and
- contribute to the creation of global communities, benefiting humanity.

4. **Availability.** Standards specifications that are made accessible to all for implementation and deployment. Affirming standards organizations have defined procedures to develop specifications that can be implemented under fair terms. Given market diversity, fair terms may vary from royalty-free (especially where open source is commonplace) to fair, reasonable, and non-discriminatory terms (FRAND).

5. **Voluntary adoption.** Standards are voluntarily adopted and success is determined by the market.

By signing this statement, we affirm our support for and adherence to these principles.
