Wrap Up/Strawman Goals

- **Meta goal: Evolve the Internet** at large by exploring various SDN architectures
  - In conjunction with other research fora (e.g., SIGCOMM)
  - Venue for “Wild” Ideas
    - SDN applicability to emerging technologies (ICN/NDN, DTN, …)

- Develop SDNRG Work Plan/Taxonomy
  - Contribution and interest driven model
  - Near vs. Long Term
  - Apply research on SDN to inform the IETF in the near term
  - Investigate new/different architectures in the longer term
  - **Who is interested in helping the RG structure its work?**
  - Interim meeting focused on this topic?
    - Possible to do something between now and ATL?
    - Other venues we can combine with?

- Produce a (set of) SDN problem statement(s)
  - Motivation
  - Fundamental concepts
  - Use cases?
  - Relationship to current Internet technologies

- Survey of existing SDN models (in a structured way)

- Others
