Working Group Draft Submitted

formerly draft-cjlmw-cdni-metadata-01

Matt Caulfield, Kent Leung, Francois Le Faucheur, Ben Niven-Jenkins, Grant Watson, Rob Murray

resolved conflicts with draft-ma-cdni-metadata-03

Kevin Ma
Base Set of Metadata

What is the default set of metadata that all CDNs must support to interoperate?

Current metadata:
- Acquisition sources
- Location, Time Window, and Protocol ACLs
- Authentication
XML vs JSON

How should metadata be encoded?

draft-ietf-cdni-metadata-00 includes both encodings

Pick one to use consistently across all CDNI interfaces
Relationship with Capabilities

Should CDN capabilities be tied to metadata?

i.e. CDN capabilities are summarized by a list of metadata properties that the CDN supports

e.g. CDN A advertises to CDN B that is supports metadata properties x-feature-1 and x-feature-2. If CDN B receives a request for delivery with x-feature-1 then it can redirect to CDN A
Metadata Rewriting

Should metadata be rewritten between CDNs?

CDNI Metadata may include URIs pointing to a uCDN

If passed through multiple CDNs, how should these URIs be rewritten?
