

Session-ID Backward Compatibility

IETF#85, Atlanta, U.S.A

Christer.Holmberg@ericsson.com

GOAL

- Make the INSIPID Session identifier mechanism backward compatible with draft-kaplan-session-id

BACKWARD COMPATIBILITY

- **SYNTAX**

- ABNF must be backward compatible

- **USAGE**

- UAC sending Session-ID in a SIP request must be prepared to receive identical value in SIP response
- UAS must be prepared to receive value that only contains the "part" of the UAC
