

Manet WG reactive protocol document status

Charlie Perkins

Contents

- New revisions for reactive protocol WG document
- Plan to ensure compatibility with LOADng
- Editorial responsibility

Plan for LOADng compatibility

- AODVv2 base protocol is already close
- Few minor details (ICMP, cleaning up broken routes, dest-only RREQ flag, ...)
- I have a pretty clear understanding of goals
- Input from LOADng team welcome
- As of now I am prohibited from using LOADng text

Specification revisions in 2012

- March revision was done in extraordinary hurry to satisfy WG editorship expectation
- plan for a way forward; none was found
- October: document merge not happening!
 - Alternative, work solely from ...dymo-22 to still achieve a conceptual merge
 - Thus, another very hasty revision → ..23.txt
- Soon: a “non-hasty”, quality product

Editorial Responsibility

- Responsive to WG input
- Manage document text revision
- Manage I-D submission
- Prodding for mailing-list input
- Resolution via IETF tools Issue Tracker
- Fair to all parties, beholden to none
- Expedited completion of charter goals
