Changes from -00 to -01

- Picked up more terminology from framework document
- Shortened and cleaned up text relating to IEEE 802.1 Ethernets
  - Most text moved to “related work” section
  - Removed text describing alleged deficiencies (they are not the motivator for NVO3)
- Generalized the text on forwarding table size (covers both L2 and L3 now)
Changes from -00 to -01 (cont)

- Added introductory paragraph to make clear that NVO3 is focused on providing service (both L2 and L3) over an IP “underlay” transport network
- Added new section on optimal forwarding (trombone routing)
- Added section on data plane (for completeness)
- Improvements to SPB section
- Added VDP subsection to Related Work section
- Filled in Security Considerations
- Numerous editorial improvements
Next Steps

- Have addressed all known outstanding comments
- Have received no comments since posting revision
- WG Last Call to flush out any remaining issues?
