OAuth 2.0 Use Cases

Zachary Zeltsan
November 2012
Outline

- Use cases in the draft `draft-oauth-use-cases` by
  George Fletcher (gffletch@aol.com),
  Torsten Lodderstedt (torsten@lodderstedt.net), and
  Zachary Zeltsan (zachary.zeltsan@alcatel-lucent.com)

- Overall list and supported use cases
- Template for a use case
- Next steps
Overall list and supported use cases

- Web server (Authorization Code grant)
- User-agent (Implicit grant)
- Native Application (Implicit grant)
- In-App-Payment (based on Native Application) *
- Device
- Client password credentials (Client Credentials grant)
- Assertion (Extension grant)
- Access token exchange *
  (can be supported with the use of SAML 2.0 Bearer Assertion Profiles and JSON Web Token (JWT) Bearer Token Profiles)
- Multiple access tokens *
- Gateway for browser-based VoIP applets *
- Signed Messages *
- Signature with asymmetric secret *

* cases not supported in OAuth 2.0
Next steps

• Update the set of the use cases
  • Is the set complete?
  • Are all use cases needed?

• Send for WGLC
