PCP Server Selection

I-D.boucadair-pcp-server-selection
IETF 85-Atlanta, November 2012

M. Boucadair, R. Penno & D. Wing
Context

• This text was part of draft-ietf-pcp-dhcp

• It was removed from the DHCP draft as requested in IETF#84

• Server selection is still an issue, e.g.,
  – When several names are provisioned
  – When several IP addresses are returned
Rationale

- If several PCP Names are configured, each Name is treated as a separate PCP Server
- Each Name may be resolved into one IP address or a list of IP addresses
- DHCP is only an example among others to configure PCP Name(s)
- Two procedures are defined
  - In parallel
  - Or sequential
Next Step

• What to do with this I-D?
