status of 5066bis

Ed Beili
Dan Romascanu
status of 5066bis

• WGLC for draft-ietf-opsawg-rfc5066bis-01
  – Consistent comments from David Harrington and Tom Petsch questioning the need to obsolete 5066
  – Proposed resolution
    • RFC 5066 will not be obsoleted
      – Precedent in the Bridge MIB RFCs
    • rfc5066bis will UPDATE RFC 5066
    • rfc5066 will explain the status
      – IF-CAP-STACK-MIB remains under IETF change control
      – The IEEE creates IEEE8023-EFM-CU-MIB which will continue the evolution of EFM-Cu management
    • The MIB module () IF-CAP-STACK-MIB will not be copied but just referred

• In the meantime in the IEEE
  – IEEE 802.3.1 passed Sponsor Ballot
  – Based on Dan’s comment the IEEE 802.3 took out IEEE8023-IF-CAP-STACK-MIB and now refer to 5066bis
  – Schedule for approval and publication – start of June
  – They expect aggressive schedule from the IETF
    • Should reference an RFC number (IESG approval and RFC Editor allocation)

• Companion document will follow
  – Describes the process of migrating the Ethernet MIB modules from the IETF to the IEEE 802.3
  – Similar to RFC 4633 - \generic enough to apply to the HUMBIB-IEEE 802.3 migration document, to the possible extent will refer to the relevant sections of RFC 4663, without quoting the text verbatim
