

Recharter Discussion

- Starting point
 - usual operation mode, starting from PCC, and using a stateful PCE is **already in charter**
 - boundary for other workflows less clear
- Proposal discussed with the AD
 - add in the charter text:

“Definition of the PCEP extensions used by a **stateful PCE** for recommending a **new path** for an existing or **new LSP** to the head-end LSR of the LSP.”
 - update milestones accordingly
 - existing ones to new dates
 - add new ones related to stateful work
