Port Control Protocol (PCP)
Proxy Function

draft-ietf-pcp-proxy
IETF 86-Orlando, March 2013

M. Boucadair, R. Penno & D. Wing
Presenter: J. Queiroz
Changes Log

• -01 changes
  – Add a new section on Mapping Repair handling
  – Optional-to-process options MAY be removed by the proxy
    • The initial text was “SHOULD remove”
    • Add text to justify the motivation for this change
  – Text clean-up
    • Adjust the text to be aligned with the base spec (e.g., include mapping nonce)
Changes Log

• -02 changes
  – Text reviewed by Tiru (Many thanks)
  – Add new text on THIRD_PARTY
  – Add a text in the security section for the device embedding the PCP Proxy to discard PCP messages sent directly to the PCP Server
    • “The device embedding the PCP Proxy MAY block PCP requests directly”
Discussion Point

• The current text does not include any discussion on PCP authentication
  – Some requirements are listed in http://tools.ietf.org/html/draft-reddy-pcp-auth-req-00
  – Should the Proxy document be updated or should its scope be restricted to base spec?
  – Thoughts?
• Is there any other point to be covered in the Proxy spec?
