

I E T F[®]

Network Service Chaining (NSC)

Date: 29th July

Time: 15:10

Room: Potsdam 1

Chair: Jim Guichard (jguichar@cisco.com),
Thomas Narten (narten@us.ibm.com)

Description:

Service chaining is a broad term used to describe a common model for delivering multiple services in a specific order. The goal of this BoF is to let service providers explain their NSC use cases and requirements so that the IETF is exposed to the problem space and can determine the next actions.
