

A RELOAD Usage for Distributed Conference Control (DisCo)

draft-ietf-p2psip-disco-02

Thomas C. Schmidt
t.schmidt@ieee.org

Prerequisite: ShaRe

o Urgently needs WG reviews:

draft-ietf-p2psip-share-01

Reminder

- o DisCo defines a protocol for distributed conferencing in RELOAD
 - Selected Focus Peers take the role of a conference Focus group
- o Focus Peers register and coordinate in a shared resource (→ ShaRe)
- o All Focus Peers maintain a complete view of the conference by synchronizing a distributed conference event package
- o Supports: Balancing, resilience, proximity selection, and inclusion of legacy clients

Status of the Draft

- o draft-ietf-p2psip-disco-00
 - WG draft from mid-state work
 - Gap-filling and polishing needed

- o draft-ietf-p2psip-disco-02 (fresh)
 - Partial polishing
 - Further work needed

Roadmap

- o Next weeks: Continuous work through the document
- o Should converge until Vancouver
