# **POSH BoF**

## **PKIX Over Secure HTTP**

**If you can get proper PKIX certificates,  
TLS is utterly sane.**

**But you can't get such certs if you're hosting  
someone else's domain!**

**The problem would of course be solved  
by DNSSEC and DANE,**

**But deployment is slow and operators  
are feeling immediate pain.**

**Yet maybe we can get certs over HTTPS,  
if the idea isn't completely profane.**

**And that's what the POSH BoF will explore  
and, we hope, clearly explain.**

**When: Monday, 16:20-17:20**

**Where: Charlottenburg 2/3**
