

Mapping characters for PRECIS classes

draft-ietf-precis-mappings-02

Takahiro NEMOTO

t.nemo10@kmd.keio.ac.jp

Keio University

Changes from -01 to -02

- -02 unified PRECIS notation in all capital letters as well as other documents.
- -02 removed sections that are "Types of mapping" and "Protocol independent mapping".
 - Width mapping is in framework document.
- -02 resolved open issues of mapping order between the framework document and this document.
- -02 updated the Section 4 "Open issues" to address new issue raised on mailing list.

Open Issue

From PRECIS WG ML:

Some protocols require local case mapping according to the normative of the PRECIS framework.

- Is it necessary to move the local case mapping in the framework document?
 - But, the local case mapping is for localization and the PRECIS framework is for internationalization.

Authors' proposal

- Guidelines regarding mappings including localization that make PRECIS framework more effective should be given in this document.
