STIR BoF
Secure Telephone Identity Revisited

Date: Tuesday, July 30th at 0900
Room: Potsdam 1
Chair: Brian Rosen and Russ Housley

Description:

The lack of real-time communication origin security leads to many problems, including robocalling, vishing, and swatting.

Should a working group be formed to specify a SIP header-based mechanism to verify the originator of a SIP session is authorized to use the claimed origin telephone number?
