

# URNBIS: 2141bis & 3406bis

Peter Saint-Andre  
URNBIS WG  
IETF 87, Berlin

# 2141bis - progress

- Allowed URI query components and URI fragment identifier components in URN syntax (consistent with RFC 3986)
- These are *\*not\** part of the Namespace Specific String (NSS), but can be appended
- Actual *\*usage\** of query and fragment to be defined in other specs (e.g., for URN resolution or specific namespaces)

# 2141bis - open issues

- Remove text about functional equivalence?  
(RFC 3986 might be enough)
- Change “lexical equivalence” to mere  
“equivalence” here and in 3406bis?  
(consistent with RFC 3986)

# 3406bis - progress

- Added text about Security Considerations sections in registration requests
- Expanded text about Namespace Considerations sections and Community Considerations sections
- Added text about URI query components and URI fragment identifier components in syntactic structure section

# 3406bis - open issues (I)

- IANA policy now is “IETF Review” (cf. RFC 5226). Should it be loosened to:
  - “RFC Required” (allowing independent submissions)
  - “Specification Required” (allowing non-IETF specs)
  - “Expert Review” (no spec needed)

# 3406bis - open issues (2)

- Move “Namespace Considerations”, “Community Considerations”, and “Security Considerations” to template? (less confusing, and useful if we don’t require an RFC...)
- Accept proposed text about URN namespaces not being mutually exclusive?
