

draft-ietf-v6ops-64share-08

C. Byrne (T-Mobile USA)

D. Drown

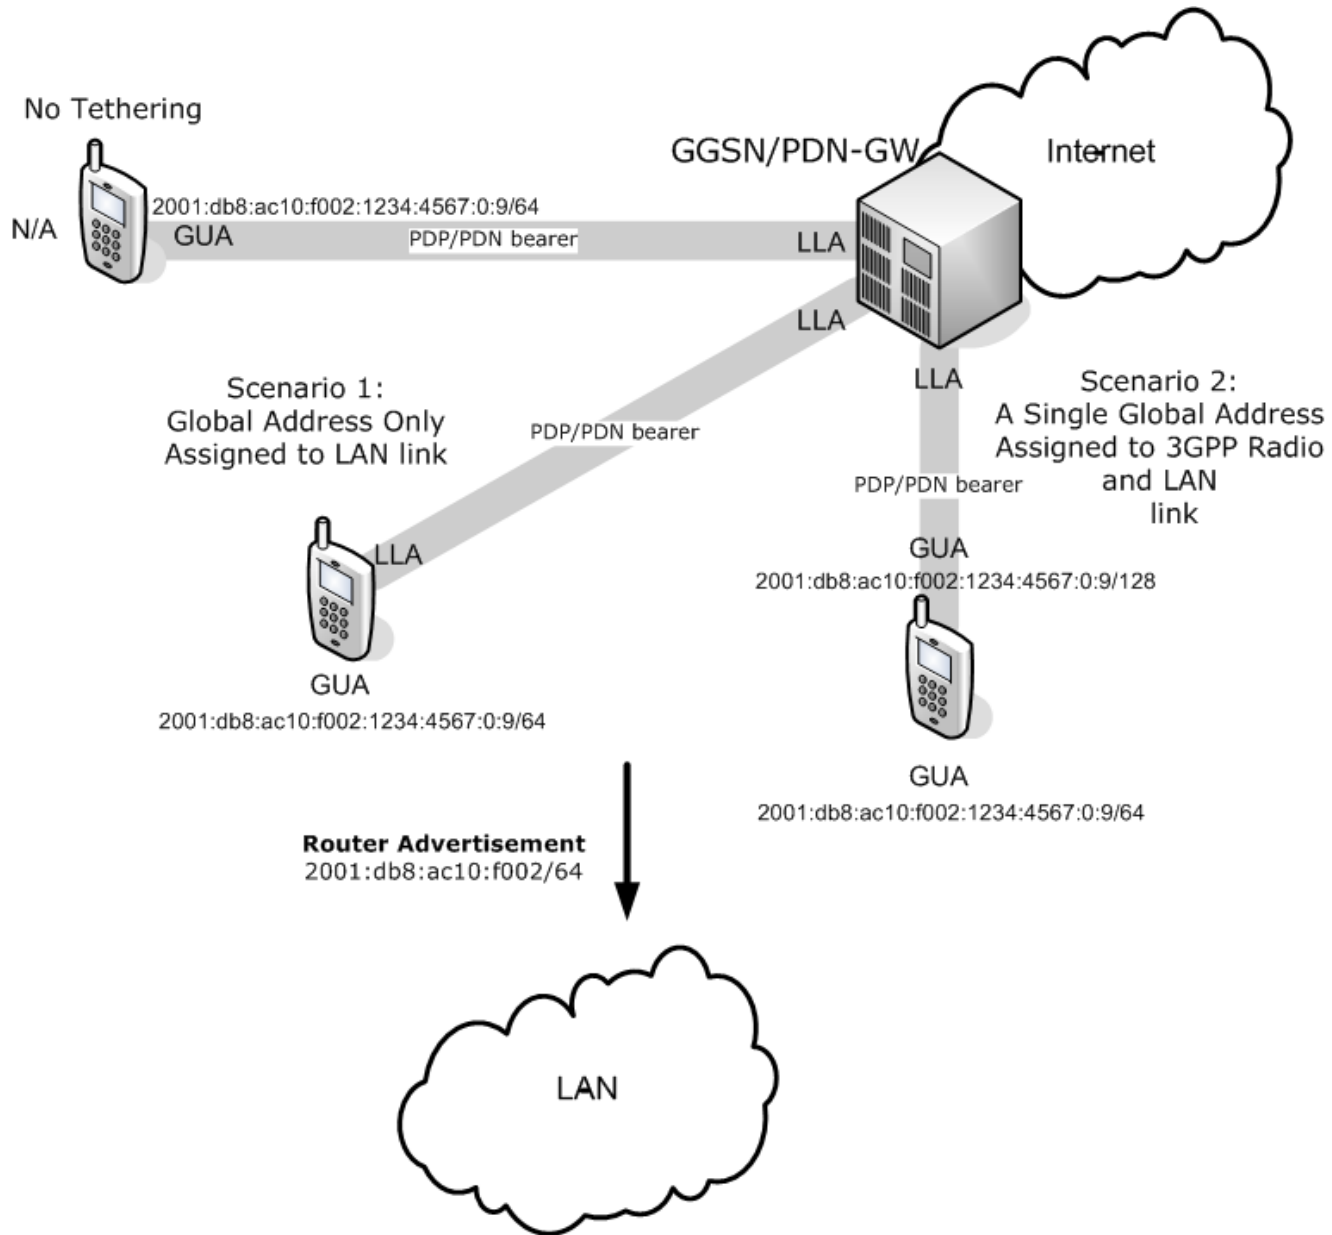

A. Vizdal (Deutsche Telekom AG)

A solution to a 3GPP specific issue

- IPv6 tethering an issue prior 3GPP Rel-10
- DHCP-PD is ideal, but optional part of Rel-10
- No Rel-10 production network/device (yet)

- IPv6 tethering is needed

- Android open-source code available

Recent changes

- -08 issued addressing ML/WGLC comments
- Scenario 1 has been dropped
- 'an interface' replaced with 'a link' to better align with the IPv6 addressing architecture RFC

Next-Steps

- WG guidance / WGLC?
