

Goal: Automating DNSSEC delegation trust maintenance

draft-kumari-ogud-dnsop-cds-05

Warren Kumari, Olafur Gudmundsson, George Barwood

Recent changes

- One RR (CDS) → One RR (CTA) → Two RR (CDS / CDNSKEY)
- Adopted processing rules for two types

New rules.

- Child MAY publish both.
- Parent SHOULD choose one or the other.
- Parent SHOULD NOT perform consistency check between CDS and CDNSKEY.
- Limits error conditions / complexity.

Still polling...

- Draft still suggests polling or “push a button”.
- Understand that other more scalable triggers might be desired.
 - draft-bob-[notify|update|foo]-cds-trigger?

Discussion!

Next step WGLC?
