

Hardening the Internet

IETF 88 – Vancouver, BC, CA
6 November 2013

Technical Topic

- What can be done to protect Internet users from pervasive surveillance by well funded adversaries?
- Who needs to do the work?
 - IETF – improve our protocols and best practices
 - IAB – address long-term architecture issues, roadblocks to and opportunities for stronger security
 - Others (there's plenty for all to do)

We all have a role to play!

Our Speakers

- Bruce Schneier
 - What we know and don't know
- Brian Carpenter
 - An overview of previous IETF positions on security and privacy
- Stephen Farrell
 - Potential IETF activities
