IGF in Bali

IGOVUPDATE BoF
IETF88, Vancouver BC
What’s an IGF?

• Internet Governance Forum
• UN-chartered forum
• Result of World Summit on the Information Society
• About discussion
  – No charter for making decisions
• Annual meetings since 2006
Governance?

• Partly about rules of operation
  – Who controls name space, routing, &c.

• Partly about rules of behaviour
  – No different from other behavioural controls in law

• Partly about who pays

• Partly about rights
Yes, Governance

• Regulators naturally see opportunities for regulations
• Legislators naturally see opportunities for legislation
• The recent revelations of government activity (naturally) were a hot topic
IETF “representation”

• The idea of “representatives” very important in this forum
• Jari spoke at the opening ceremony
• Jari was on a panel, “Taking Stock / Emerging Issues – Internet Surveillance”
• IETF open session with Jari, Pete Resnick, and Andrew Sullivan
• All three participated in various other sessions in the week
Changes in the world

• Lots of attention to revelations of various government action
• This is causing some governments to press for greater government-to-government (“multilateral”) discussions
• As those discussions happen, we must have a clear idea of what we want
“Coalition of the willing”

- There have been various suggestions about a new forum for multistakeholder Internet governance
- Can’t just use the IGF (not chartered to make decisions) but can work within that structure
- Organizing discussion is still going on
A useful draft issues list

• It’s a Draft!
• Send discussion to ...

2013-11-04

IETF88 IGOVUPDATE
Good place for discussion

internetgovtech@iab.org list

• Issues related to Internet governance and regulation

• IAB's ITU-T Coordination Program Leads (currently Ross Callon and Joel Halpern) may moderate at their discretion
