

VP8 RTP Payload

Harald Alvestrand

Status

- draft-ietf-payload-vp8-11
- Adds 1:8 aspect ratio limitation
 - Consistent with AVC profiles
- One comment: Bug in examples (9 vs 17)
 - fix: s/0 1 0 0 1/1 0 0 0 1/g - applied

Open Issue: media size negotiation

- Personal preference: Solve this independently
- Problem exists, and is independent of which video codecs are used.
- Problem is not solved for H.263 to H.264 either
- Fix, once it exists, can be applied to all RTP encapsulations equally
- Alternate: Hold *all* video payload work in PAYLOAD until this is solved
