

:: ecrit-similar-location

Roger Marshall, Jeff Martin - TeleCommunication Systems

Brian Rosen - Neustar

- :: Extends RFC 5222 LoST findServiceResponse message

- :: Two extensions described

 - If returned civic location is valid, yet is incomplete, and LoST server knows more

 - :: Provides additional caType elements

 - If returned civic location has any civic address elements marked as <invalid>

 - :: Suggests alternative locations

:: Overview

- :: Revised to -04 based on a couple of reviews
 - Better describe how this extension can be useful
 - Align with RFC2119
 - Discuss if/how clients can be made aware of this extension's added information
 - Add security considerations around more info than input for both valid and invalid addresses
 - Acknowledged the need for extension point RelaxNG/detailed xml and examples
 - Reworked terminology to better align with text
 - General editorial cleanup

[thank you Barbara Stark & Scott Bradner]

:: Update

:: Not too different from addressing interfaces that inquire, “Did you mean?”

:: Emergency Services dependencies do exist (NENA/EENA)

- LIS provision of location records

- Valuable tool in deployment of NG9-1-1

:: WG Adopt?

:: Next Steps
