

# **I2RS Document Progression**

# Current WG Status

# How to Get Things Moving

# Existing Use Case Documents

- Existing use case documents have been summarized very effectively by Sue
- It's unlikely that we will progress many of the individual use case documents we've looked to adopt to LC

## Suggestion:

- Join in-scope documents
  - Add expository text and corrections to Sue's summary draft ?
  - Attribution and Credits?

# Info Models

- YANG Data Models now to be included post WG selection
- Info models still mandated but primarily for ease of document use

# General Document Composition Going Forward

- Use Case Exposition
- Info Model and Exposition
- Data Model

# Questions and Concerns on Models

- Given that we are building models with significant overlap, often augmenting some hypothetical underlying model, how should model development occur?
- What infrastructure resources are required in order to support this?
- What IETF processes must be created in order to support this?
- IPR Concerns?

# Model Development

- Design teams for specific new models
- Mimic / Expand NetMod's Agile development model:
  - Shared repo for YANG models
  - Sandboxes for new models?
  - Review prior to merge by <?>
- Drafts Generated automatically on some periodic basis?

# Questions, Concerns, Flames
