

# **I2RS Status and WG Vision**

## **YANG Accepted as Modeling Language**

- YANG has now been accepted as the data modeling language for I2RS
- Perfectly acceptable to include datamodels in documents

# Infomodels and Datamodels Going Forward

- Infomodels still required
- Primarily for readability and ease of doc use
- May be generated from Datamodels  
(obviously)

## Design Team Creation

- Formation of individual design teams for specific use cases.
- Will probably start with current authors of infomodels.
- Will fill out new documents to cover fully chartered items.

## Meeting Cadence

- Teleconferences every two weeks.
- Publish interim I-D halfway between IETFs to bring exposure of work in progress to the WG

## Recharter - When and What

- Add datamodel work explicitly to the existing charter.
- Stay with current use cases until we produce the first data models. (Target next IETF for first pass)
- Look at picking up new use cases and data models once existing work caught up on.
