

reserving mail, home, and corp

draft-chapin-additional-reserved-tlds-02

Lyman Chapin and Mark McFadden

markmcfadden@icc-uk.com

RFC 6761

- criteria and procedures for reserving a domain name for special use
- IANA registry for such names
- draft-chapin-additional-reserved-tlds-02 complies with that process

3 reserved tlds

- this draft requests that three names be added to the RFC 6761 special purpose registry
 - name
 - corp
 - Mail
- these are the 3 names that were identified as posing operational hazards by SSAC and both ICANN name collision studies

why?

- operational and engineering reasons only
- problems related to potential delegation of previously invalid labels that have frequently appeared as queries to the root
 - lots of evidence here
 - <https://www.icann.org/en/system/files/files/sac-045-en.pdf>
 - affected labels
 - home
 - corp
- name collision problem
 - lots of evidence here as well
 - <https://www.icann.org/en/system/files/files/sac-062-en.pdf>
 - <https://www.icann.org/en/about/staff/security/ssr/name-collision-mitigation-26feb14-en.pdf>
 - affected label
 - mail

what's new in this –02 draft

- limited the labels to be reserved to those identified in all three relevant studies
- small editorial changes

moving forward

- we'd like to!
- support the interim virtual meeting...
- support the need for RFC 6761bis...
- ...but there is no disagreement that these 3 names should be reserved
