

Multi-path Label Switched Paths Signaled Using RSVP-TE

Kireeti Kompella
draft-kompella-mpls-rsvp-ecmp

Status

- Draft has been around for a while, in 6th version
 - Good response from SPs
- Juniper has received positive feedback with an implementation of multi-path LSPs
 - However, without Association object, so several optimizations are not possible

Request

1. Early allocation of IANA code points
2. Adoption as WG document
