

# YANG Library

draft-ietf-netconf-yang-library-00

NETCONF WG

IETF #92 Dallas, TX, USA

Andy Bierman <andy@yumaworks.com>

Martin Björklund <mbj@tail-f.com>

Kent Watsen <kwatsen@juniper.net>

v0.1

# Agenda

- YANG Library-00 Open Issues

# #1 conformance leaf

- Should conformance leaf be removed?
  - No, used to identify module revision
    - Needed by RESTCONF and CoMI
    - Don't really need NETCONF to implement this module
  - Suggestion to change from boolean to an enumeration
    - Not sure what the enum names are supposed to be

## #2: multi-protocol support

- How to identify which protocols are supporting which YANG modules in the server?
  - No proposals to fix this yet
    - Each protocol WG could add its own augmenting nodes
    - Ignore problem and let vendors define their own solutions
    - Define a leaf-list of identityref

# #3 ietf-netconf-monitoring

- Several questions raised
  - <https://github.com/netconf-wg/yang-library/issues/3>
    - No comments or interest in this issue
  - The ietf-netconf-monitoring module will be ignored
  - There is no official relationship between the ietf-netconf-monitoring 'schema' data structure and the ietf-yang-library

# Summary

- Need to resolve issue #1 and #2
  - Leaf proposals needed
