# The Good

- WG LC
- Client implementation in Linux kernel 4.0
- 3 server implementations in development

# The Bad

- WG LC
- Confusion on role of uid/gid for fencing
  - Taken as a security model
  - Title of section does not help
- Need to straighten out

# The Ugly

- Fencing has some interactions with kerberized access
- Multiple non-standard approaches to doing so
  - Remember, can not mandate changes to the DS
- Several suggestions to just drop kerberized access requirements
