

NFSv4.2

Tom Haynes
loghyr@primarydata.com

How many WG LCs?

- Getting feedback from implementations
- Useful to track the copy state across the destination
- Got rid of the NFS URL

CLONE

- Almost a COPY
- If server can have a COW, do it!
- Not asynchronous
- Easier for the client to implement
- Other copy offload implementations are starting to do this

Do we stay or do we go?

- Bruce asked for pushing COPY and CLONE out of NFSv4.2
 - Great test for minor versioning
 - Almost have working implementations
- Either way will cause
 - some delay
 - another WG LC
