Siva Sivabalan (msiva@cisco.com)

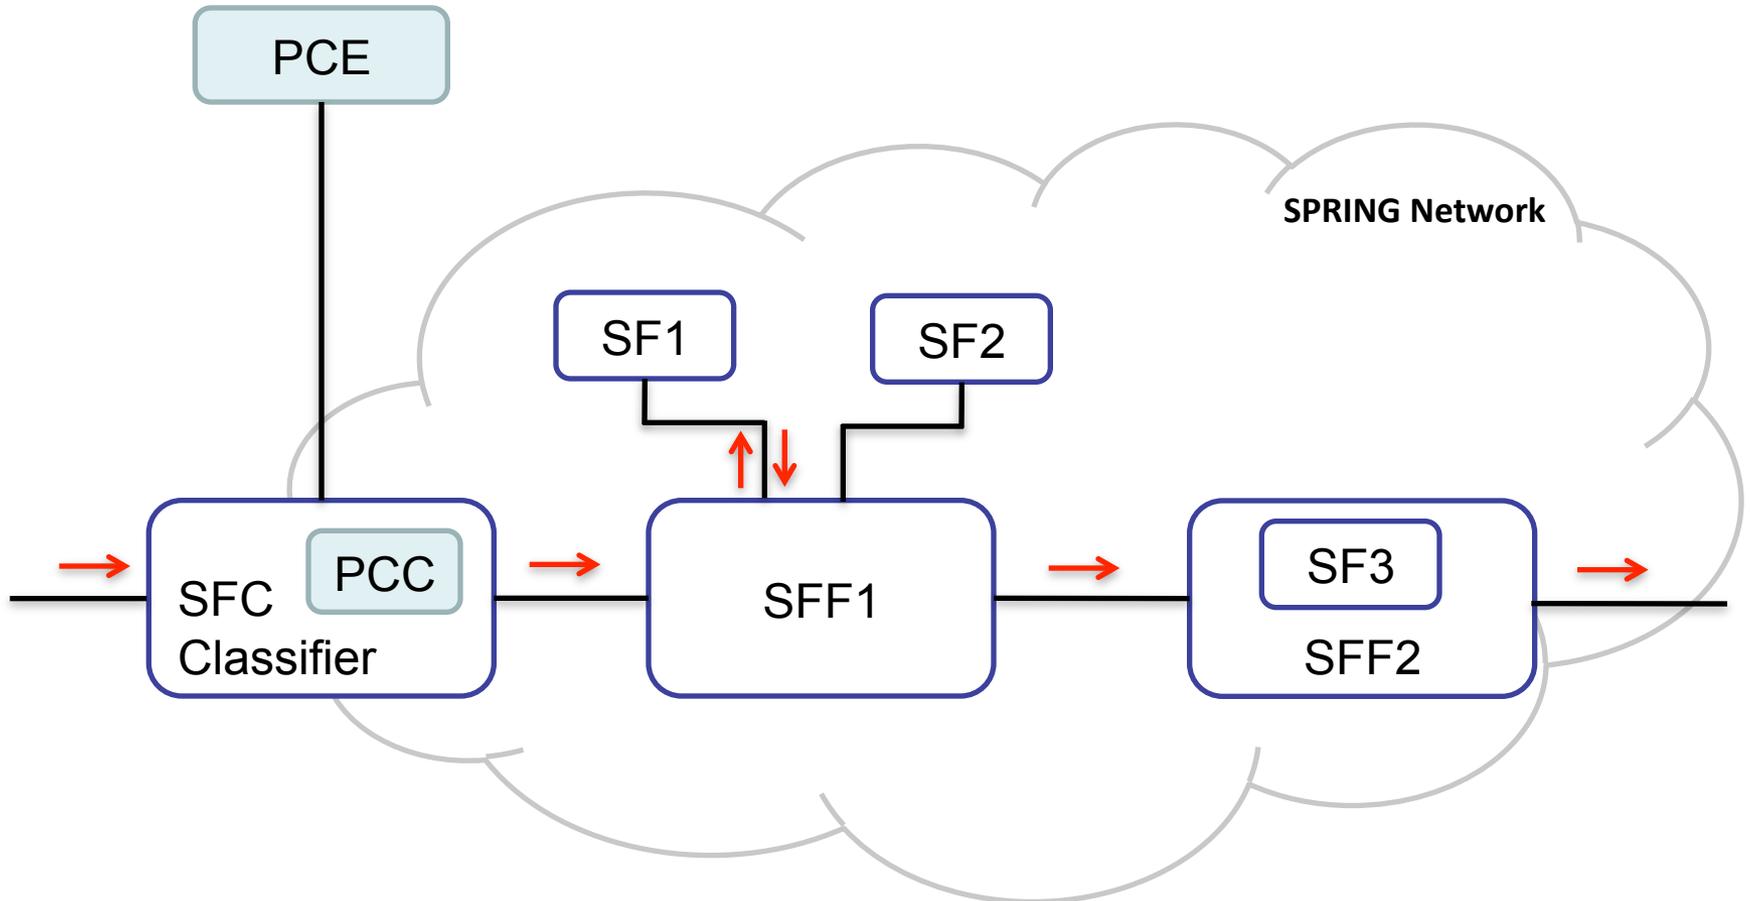

Himanshu Shah (hshah@ciena.com)

Luis M. Contreras (luismiguel.contrerasmurillo@telefonica.com)

# Motivation

- Allow a PCE to compute and instantiate service function paths in SPRING networks
- Support different types of service function paths by PCE
- Specify extensions to both stateless PCE model and stateful PCE model

# PCE-based SFC in SPRING Network

PCE is used to compute an SFP in SPRING networks, for example, an SFP corresponding to an SFC of {SF1 ->SF3} can be expressed as {SFF1 -> SF1 -> SFF2 -> SF3}. An SR-specific SFP can be described as an ordered list of node SIDs (representing SFFs) and Service Function SIDs (representing SFs).

# PCEP Message Extensions

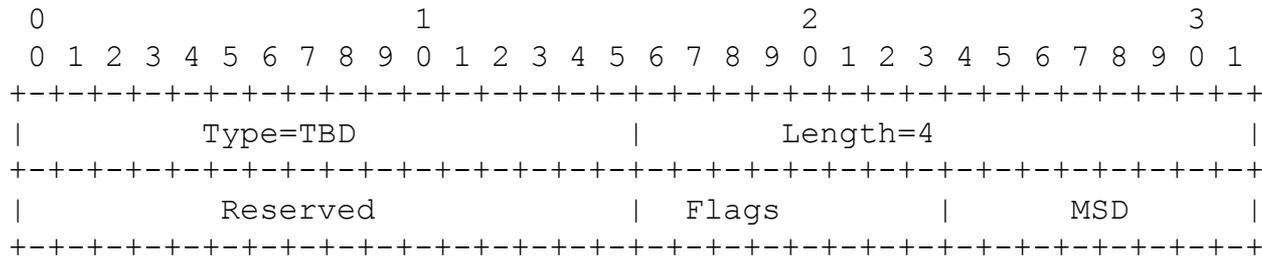

- PCReq Message
  - no changes to the PCReq message format
  - requires the PATH-SETUP-TYPE TLV [I-D.sivabalan-pce-lsp-setup-type] to be carried in the RP Object in order for a PCC to request a particular type of SFP.
  - requires the Include Route Object (IRO) to be carried in the PCReq message in order for a PCC to specify SFC. A new IRO sub-object type needs to be defined for SF.
- PCRep Message
  - define the format carrying an SFP from a PCE to a PCC  
`<response>::=<RP> [<NO-PATH>] [<path-list>]`  
where, `<path-list>::=<SR-SFC-ERO>[<path-list>]`
- PCUpd Message
  - define the format carrying an SFP from a PCE to a PCC  
`<update-request>::=<SRP><path-list>`  
where, `<path-list>::=<SR-SFC-ERO>[<path-list>]`
- PCRpt Message
  - define the format carrying an SFP from a PCC to a PCE  
`<state-report>::=[<SRP>]<path-list>`  
where, `<path-list>::=<SR-SFC-ERO>[<path-list>]`

# Object Formats 1/2

- OPEN Object

- SR-SFC PCE Capability TLV

Optional, to negotiate SR-SFC capability on the PCEP session

- RP/SRP Object

- the RP or SRP object MUST carry a PATH- SETUP-TYPE TLV specified in [I-D.sivabalan-pce-lsp-setup-type].

- PST = 2: The path is an SFP

- PST = 3: The path is a compact SFP

- PST = 4: The path is an SR-specific SFP

- PST = 5: The path is a compact SR-specific SFP

# Object Formats 2/2

➤ SR-SFC-ERO Subobject

```
