

# **RTCWEB Gateways**

Status, decisions and further work

# Current version: -01

## Changes:

- Added note about implications of non-support of BUNDLE
- Added "Considerations for SDP-using networks" section

No controversy seems to have been generated.

# Usage of -gateway in other fora

- 3GPP 23.334 and 29.334
  - Gateways a 3GPP voice/video/text service
  - Refers to H.248 for gateway control
  - Text functionality is outside of WebRTC (so far)
- H.248.94 - WebRTC guidelines

Neither depends on what status -gateway has.  
(Disclaimer: I haven't read either spec)

# Open Issue: Target status

- Standards track
  - Normative IETF statement about what the term “WebRTC gateway” means
  - Still doesn’t define a service that can be gatewayed
- Informative
  - Source of thoughts for people gatewaying to WebRTC-based applications
  - Does not make an IETF normative statement

# Proposed Resolution
