

# SACM Information Model

# Status

- Endpoint ID Design Team
  - We've been focused on what it means to construct an identity
  - Many of the results of our current thinking are reflected in -02
  - Some agreements aren't – we will open issues for them on github
- Further work around endpoint identity
  - Nailing down the specific set of attributes for identity
  - Relationships between endpoint identifying attributes
  - Metadata about the identifying attributes themselves (for provenance, authorization, etc.)
- Next steps for SACM WG
  - Review the information model -02 draft, raise any issues with existing content
  - Review open issues as EIDT posts them
