DNAME in the root

Stéphane Bortzmeyer - AFNIC

IETF 94 - Yokohama
RFC 7535 "AS112 Redirection using DNAME" and RFC 6761 "Special-Use Domain Names".

.. local

number 2 or 3 in trailing to the root.

Changing anything in the root is very touchy.
Background

- RFC 7535 “AS112 Redirection using DNAME” and RFC 6761 “Special-Use Domain Names”.

Changing anything in the root is very touchy.
Background

- RFC 7535 “AS112 Redirection using DNAME” and RFC 6761 “Special-Use Domain Names”.
- `.local` number 2 or 3 in traffic to the root.
RFC 7535 “AS112 Redirection using DNAME” and RFC 6761 “Special-Use Domain Names”.

.local number 2 or 3 in traffic to the root.

Changing anything in the root is very touchy.
IETF role

IETF could say "TLD in the special-use registry should get a DNAME in the root, going to AS 112". Do note it leaves .home or .belkin out. Good idea or bad? Work item?
