

# draft-rosen-ecrit-lost-planned-changes

- Changes in data within a LoST server happens, usually planned events (like annexation)
- No way to push invalidation out to LIS, have to depend on periodic revalidation
- Draft proposes a new element to `<findService>` request:
  - URI to be saved with location
  - AsOf date to perform validation against
  - Also includes object pushed to LIS @ URI that contains AsOf invalidation date
- Implementors need this function, and have spoken up on the list
- NENA folks chimed in that they read it and want it
- Please adopt
