API Management

- Desire to standardize how applications register for authorization management with OAuth 2.
- Different cloud providers have different integration points and different scope / resource definitions
- Need: Open source and commercial products are having to customize extensively to deploy to each cloud service provider
- Existing work that might be leveraged:
 - <https://tools.ietf.org/html/draft-hardjono-oauth-resource-reg-06>
 - Concern: resource set is a little to UMA centric
