

SACM Requirements + Architecture updates

Nancy Cam-Winget
(ncamwing@cisco.com)

November 2015

Updates from draft-ietf-sacm-requirements-09

- Addressed issues posted on GitHub
- One remaining issue: Data Model or Op

DM-006 Provider Identification: The interfaces and actions in the data model MUST include the ability to identify data from a specific provider. For example, a SACM consumer should be able to request all data to come from a specific provider (e.g. Provider A) as there can be a larger set of providers.

- It can be viewed as an operation of Data Model

Next Steps

- Resolve last comment and revise to v11
- When does the WG feel this is ready for WGLC?

Updates from draft-ietf-sacm-architecture-04

- Addressed issues posted on GitHub
- 10 still show as open:
 - Some still need to be reviewed by commenter(s)
 - Some still need further updates
- One new item for discussion:
 - Question raised: is a NEA Client a SACM Collector or an internal provider?
 - Should this be clarified in Architecture examples?

Next Steps

- Update outstanding GitHub issues (or resolve in new draft version)
- There are still some unfinished sections:
 - Section 3.1.3: Examples of Providers/Consumers
 - Section 6: Component Capabilities
 - Section 7: Example Workflows
