# Note Well

Any submission to the IETF intended by the Contributor for publication as all or part of an IETF Internet-Draft or RFC and any statement made within the context of an IETF activity is considered an "IETF Contribution". Such statements include oral statements in IETF sessions, as well as written and electronic communications made at any time or place, which are addressed to:

- The IETF plenary session
- The IESG, or any member thereof on behalf of the IESG
- Any IETF mailing list, including the IETF list itself, any working group or design team list, or any other list functioning under IETF auspices
- Any IETF working group or portion thereof
- Any Birds of a Feather (BOF) session
- The IAB or any member thereof on behalf of the IAB
- The RFC Editor or the Internet-Drafts function

All IETF Contributions are subject to the rules of [RFC 5378](#) and [RFC 3979](#) (updated by [RFC 4879](#)).

Statements made outside of an IETF session, mailing list or other function, that are clearly not intended to be input to an IETF activity, group or function, are not IETF Contributions in the context of this notice. Please consult [RFC 5378](#) and [RFC 3979](#) for details.

A participant in any IETF activity is deemed to accept all IETF rules of process, as documented in Best Current Practices RFCs and IESG Statements.

A participant in any IETF activity acknowledges that written, audio and video records of meetings may be made and may be available to the public.

# Agenda

- **Intro: motivation for the BoF**
  - And some things we're not doing
- **Ed Lewis: draft-lewis-domain-names (20 min)**
- **Ted Hardie: draft-hardie-resolution-contexts (20 min)**
- **Brian Trammell: draft-trammell-inip-pins (20 min)**
- **Discussion**
  - Is there an interesting set of problems here?
  - Is it possible to provide good guidance on solving them?

# Intro: Internet names

“RFC 819 described Internet names as a set of directed graphs in an absolute naming context. While that work eventually lead into the creation of the domain name system, it is important to note that it does not imply that there will be a **single** resolution system for Internet names. While the most **common** Internet names by far are those which are part of the domain name system, that set of names is **not the whole**.”

I E T F

# How is this a problem?

- **Lots of name resolution systems**
  - DNS names in various scopes: local or global?
  - Onion routing
  - Multicast DNS
  - Handle system
  - URNs
  - Etc.
- **Ambiguities in resolution for individual names**
  - operational difficulties: queries in the wrong context
  - limitations for domain names

# Naming as an architectural issue

- Protocol development needs ways to construct, manipulate, and resolve names
- Name resolution systems need to co-exist
- Should the IETF describe and document best practices for identifying name resolution contexts?

# Boundaries

- The DNSOP WG is working on issues arising from the use of the special use names registry (a specific issue, with an identified home)
- We're not here to fix DNS at any layer
- New potential solutions are interesting

# Possible discussion questions

- **Is there interest in further work on these drafts?**
- **Are there more drafts that need to be written?**
- **This is an IETF BOF; is there useful work to do that could require a WG?**
