

TCP Tuning for HTTP

draft-stenberg-httpbis-tcp

Daniel Stenberg (assisted by Tim Wicinski)
IETF 95, Buenos Aires

Why Do This?

- Guidance on Best Practices for HTTP servers, clients and intermediaries.
 - Lots of time and effort have been spent learning and getting these experiences and this knowledge. This document should help lowering the bar for new implementers.
- Advice for Implementors
- More than just “Kernel Settings”

Status

- Version -01 used in CfA. Mostly positive feedback
- Draft updated to move system specific settings into Appendix.
- Added wording

Comments

- Separate into client, server, and both
- Does make sense to separate the guidance between clients and servers.
- Initially considering the server case.

WG Next Steps?

- Willing to assist Daniel moving work forward.
- Up for WG to adopt, etc.

Thanks!
