

IPsecME IANA Issues

IETF 95

Buenos Aires, Argentina

2016-04-04

Tero Kivinen <kivinen@iki.fi>

Issue

- There are IKEv2 changes coming in from the 3gpp and other standardization organizations.
- Most of those are something that would benefit from the review from the IPsecME WG.
- Quite often there is not enough interest in the WG to actual work on them.
- I as an IANA Expert reviewer for the IKEv2 IANA registries, got to review them, but this is very late and they might not want to change their specs that late.

What I would like to get

- Get earlier and wider review on the extensions done by the other organizations.
- Offer help for them to make their extensions in a way we do things in IKEv2.
- Ask for IETF people who are also in those groups to tell them that we can help, and it is better to get help early.
- Just them sending email to the IPsec list asking for help would be good.
