

draft-ijln-mpls-rfc5036bis-01.txt

IETF 95, Buenos Aires, April 2016

Ina Minei, Loa Andersson, Xia Chen, Nic Leyman, Kamran Raza

Why?

- It is the (changed) process! RFC 6410.
- Draft Standards are gone!
- The LDP specification has been Draft Standard for a decade, but would have become Proposed Standard if nothing done.

What have we done – addressed errata!

- Errata ID: 3156; typo LSR -> LSP
- Errata ID: 2133; repeated word deleted
- Errata ID: 3155; extra letter (d) removed
- Errata ID: 3415; bytes -> octets
- Errata ID: 3425; extra “of” removed
- Rejected: Errata ID: 3416, Errata ID: 4465; Errata ID: 4512;

What have we done?

- Removed the CR-LDP reference.
- Created an XML version
 - Used XML support to automate references
 - Introduced figure numbers (we might remove them, but need for discussion during the work)
- Replaced implicit tables with xml-tables
- added Introductory section tracking the changes made (to be removed prior to publication)

What are we considering to do?

- Security Section is too old and recommend antiquated methods, will need an update.
- What of the RFCs that updates RFC 5036 needs to incorporated?
- FR, can we take it out?
- ATM, can we take it out?
- Do an early IANA review of the IANA consideration
 - Potential to generate some new work
 - The IANA section is 10 years old, and requirements from IANA has improved quite a bit since when.
- Appendixes – I'm not skilled enough to create proper Appendixes, they are now just another Section (Will be fixed!)

Minor editorial changes

- Added figure and table numbers and titles
- Moved to xml tables
- added Introductory section tracking the changes made (to be removed prior to publication)

Figure Numbers

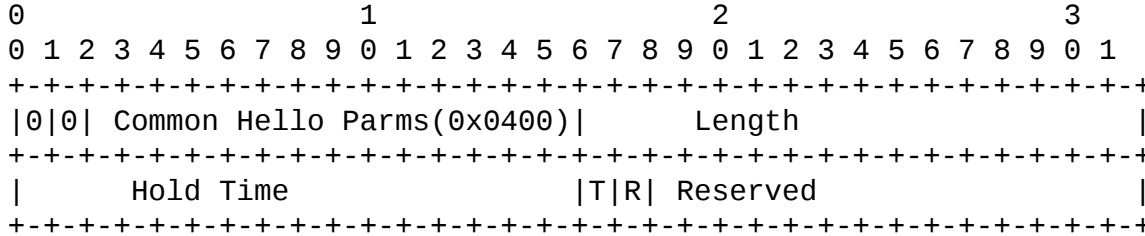

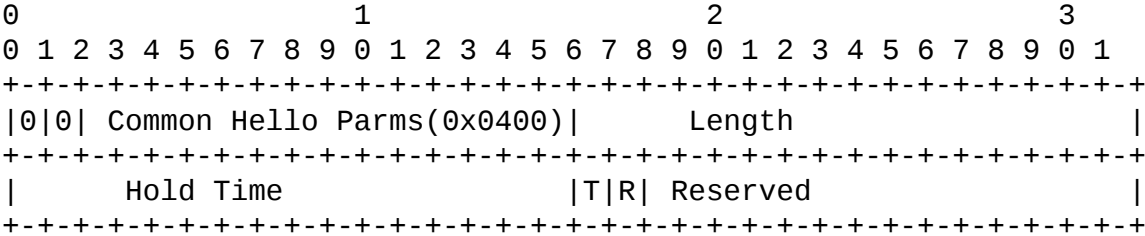

Figure 20: Hello Message

Tables vs. Tables

Optional Parameter	Type	Length	Value
Extended Status	0x0301	4	See below
Returned PDU	0x0302	var	See below
Returned Message	0x0303	var	See below

Optional Parameter	Type	Length	Value
Extended Status	0x0301	4	See below
Returned PDU	0x0302	var	See below
Returned Message	0x0303	var	See below

Table 5: LDP Messages

Note: The numbering of the table in 5036bis should be "Table 5: Optional Notification Message Parameters"
