Status Since Yokohama - Details

In-depth review of draft-ietf-netmod-syslog-model-06 by Martin Bjorklund, and Tom Petch

Result is the draft-ietf-netmod-syslog-model-07 update:

1. Greater model clarity through:
 - a) improved descriptions and references to RFCs when appropriate.
 - b) addition of a when clause to clarify the severity-operator.
 - c) Addition of 'pattern 'file:.*' to URI in the file action.
 - d) Addition of an example on how to add vendor specific facilities.
 - e) Refactor terminal and session containers for greater clarity and simplification
 - f) Eliminate references to VRF
 - g) Several minor corrections to the text – remove TBD, group level suppression filter, etc
2. Addition of TLS support for the remote action.
3. Update Netmod working group chair information.
4. Translation of the draft text to xml2rfc XML format for RFC generation using the xml2rfc tool.
