Changes from 02 version

- Correct some editor's and language errors.
- Clarify that the destination MAC of the outer Ethernet is the MAC address of RB1's port when Smart Endnode sends TRILL data packet
- Use "packet" for TRILL Data packets and TRILL IS-IS packets and use "frame" for native frames
- Add the processing procedure for edge RBridge when it receives a data packet sent to smart endnode
- Update the "IANA consideration" section
- Move some references to "Informative references" section.

Next Step

- WG last call?

Thanks!
