# Updates since -01

- One update: <https://tools.ietf.org/rfcdiff?url2=draft-ietf-payload-flexible-fec-scheme-02.txt>
- Incorporated feedback from Yokohama, IETF 94
  - Using a single packet FEC for encoding retx.

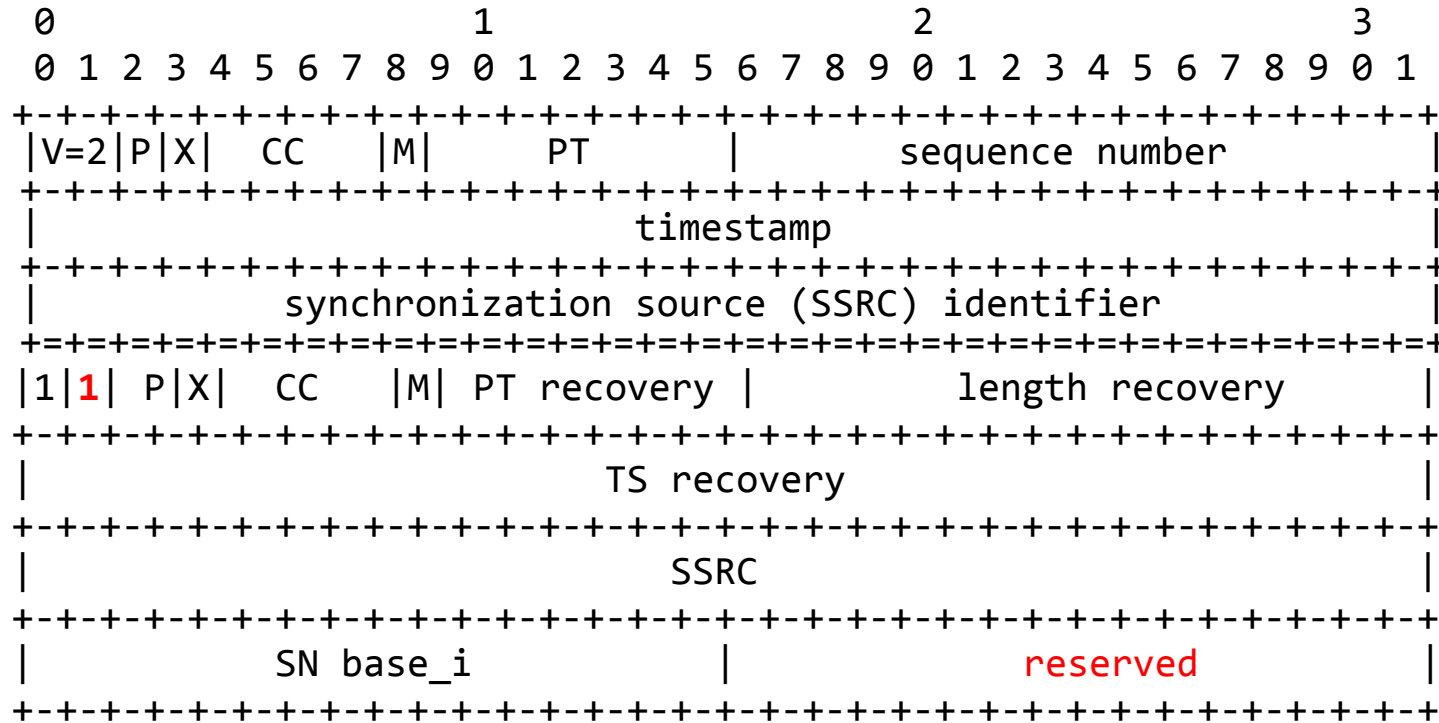

# IPR declaration

- <https://datatracker.ietf.org/ipr/2794/>
  - CISCO IPR declaration
  - pertains to the protection of multiple source RTP streams.

# -02 ver retx

# Optimize Retransmission packet

# Different types of FEC

- How to indicate it in SDP
  - code=xor, or
  - a separate media type registration?
- Should we add Reed Solomon, Raptor to this draft or a new draft?

# Next Steps

- Pending updates to the Recovery sections
  - Recovering the RTP header
  - Recovering the RTP payload
