

draft-ietf-dnsop-terminology-bis for IETF 96

Paul Hoffman, ICANN

What we did in -01

- (Apologies for the long delay)
- Added a bunch of new terms related to wildcards, closest encloser, reverse DNS, ...
- Clarified history of “SEP”
- Removed tentativeness about the future of this document

What we intend to do for -02 and beyond

- Review the list traffic that led to RFC 7719 and look for things we explicitly punted on
 - Incorporate those in individual revisions to make things easier to follow
- Start marking the RFCs that the definitions update
- Have monthly-ish new revisions
- Ask for more reviewers
